— About this document

Series	Publication Framework
Version	1.0
Status	draft
Date	2026-08-05
Unresolved placeholders	0

Notice. This document is an educational publication of Project Controls Institute Global, Inc., and does not constitute accounting, tax, legal, financial or other professional advice. It must not be relied upon as such. Where a topic depends on the contract or the governing law, entitlement and treatment vary by jurisdiction; take local advice.

Standards. Standards and frameworks are referred to by name and described in this publication's own words. No standard's text, tables, diagrams or question banks are reproduced. All trademarks remain the property of their respective owners, and no endorsement by any standards body, employer or vendor is implied or should be inferred.

Status. Project Controls Institute Global, Inc. is a Delaware Non-Stock Corporation. The Institute has been developed with reference to ISO/IEC 17024 personnel-certification principles and is **not accredited** by ANAB, IAS or any other accreditation body. It intends to seek 501(c)(3) recognition, which has not been granted. No governmental approval, academic equivalence, or guaranteed employment, promotion or salary outcome is claimed or implied.

Examples. All worked examples are illustrative and fictional. Figures are chosen to demonstrate a method, not to describe any real project, organisation or market. Sample examination items, where they appear, are study material maintained separately from any live examination bank.

Completeness. Passages marked **[CONFIRM: ...]** are operational or market facts that have not yet been confirmed from a cited source. A document carrying them is a working draft and is not approved for publication.

Document Template

The canonical skeleton. Every one of the 100 documents uses it. Section order is fixed; a section may be omitted only where the notes below say it may.

The skeleton

```

---
(front matter per FRONT-MATTER-SCHEMA.md)
---

# {Title}

> {Subtitle – one line that says what this is, not why it matters.}

**In one paragraph.** Plain-language statement of what the reader gets and what they will be able to do afterwards. Written so that someone who reads only this paragraph is not misled. No marketing.

**Who this is for.** One or two sentences naming the actual roles.

---

## 1. {The substantive opening}

Open on the thing itself. No throat-clearing, no "in today's environment", no restating the title. The strongest opening is usually the problem the reader already has, stated more precisely than they would state it themselves.

## 2. ...{body sections}...

Numbered, so clauses can be cited: "see §4.2".

## N. How this goes wrong

**Required in every S02, S03, S07 and S09 document.** The failure modes, stated concretely. This is the section practitioners screenshot, and it is the one that proves the document was written by someone who has seen the work done badly.

## N+1. Worked example

**Required in every S09 document, and wherever a method involves arithmetic.**

Label it *Illustrative figures.* Show the substitution, not just the result. State units, period, currency basis, rounding, and every assumption the answer depends on.

## N+2. Checklist

A genuinely usable list – the thing a reader can take into a meeting. Not a summary of the document in bullet form.

---

## Related

- `ID – Title` – one clause on why they should go there next
- `ID – Title` – ...

## Sources and standards

Named, dated, verifiable. Standards are named and explained in our own words, never reproduced. An empty list is honest; a fabricated entry is a rejection defect.

## Status and version

```

> Founding-stage document · Version {x.y} · {status} · Reviewed under PCI governance.
 > PCI makes no claims of accreditation or recognition beyond what is true today.

— Section notes

Section	Rule
In one paragraph	Mandatory everywhere. Reused verbatim as summary : in front matter, the Downloads Centre description and the LinkedIn blurb. Write it last, once you know what the document actually says.
Who this is for	Mandatory. Name roles — "cost engineers and control account managers" — not segments.
Numbered sections	Mandatory. Governance documents (S04, S05, S06) number to clause depth so they can be cited in a decision.
How this goes wrong	Mandatory in S02, S03, S07, S09. Optional but encouraged elsewhere.
Worked example	Mandatory in S09 and anywhere arithmetic appears. Every figure independently verified.
Checklist	Mandatory in S09 and S10. Optional elsewhere.
Related	Mandatory, minimum two entries, IDs must exist in the registry.
Sources and standards	Mandatory heading; may legitimately be empty.
Status and version	Mandatory, verbatim footer stamp.

— Template-series variant (S10)

Templates invert the shape: the deliverable is the instrument, not the essay.

```

---
(front matter)
---

# {Template name}

> {What it produces.}

**In one paragraph.** ...

**Who this is for.** ...

## 1. When to use this
## 2. How to complete it
Field-by-field instructions, in the order the user meets them.
## 3. The template
The instrument itself – table, form or structure, ready to copy. Every column defined.
## 4. Worked fragment
A partially completed example. *Illustrative figures.*
## 5. Common mistakes
## 6. Adapting it
What you may safely change, and what you must not.

## Related / Sources and standards / Status and version

```

Templates must be usable as plain Markdown or pasted into a spreadsheet. Where a column is calculated, state the formula in words **and** as a spreadsheet expression, and verify it.

— What "detailed" means here

Detail is specificity, not length. A document is detailed when it:

- names the artefact, the field, the frequency and the owner rather than "the relevant documentation";
- gives the number and where it comes from rather than "appropriate contingency";
- says what to do when the ideal is unavailable, because it usually is;
- distinguishes the rule from the judgement, and says which is which;
- survives a reader asking "yes, but how?" three times in a row.

Padding a document to look thorough is a rejection defect. So is a document that answers "what" and never "how".
