

Governance and Review

VERSION 1.0 · DRAFT

2026-08-05

PROJECT CONTROLS INSTITUTE GLOBAL, INC.

AI proposes. The professional disposes.

— About this document

Series	Publication Framework
Version	1.0
Status	draft
Date	2026-08-05
Unresolved placeholders	2

Notice. This document is an educational publication of Project Controls Institute Global, Inc., and does not constitute accounting, tax, legal, financial or other professional advice. It must not be relied upon as such. Where a topic depends on the contract or the governing law, entitlement and treatment vary by jurisdiction; take local advice.

Standards. Standards and frameworks are referred to by name and described in this publication's own words. No standard's text, tables, diagrams or question banks are reproduced. All trademarks remain the property of their respective owners, and no endorsement by any standards body, employer or vendor is implied or should be inferred.

Status. Project Controls Institute Global, Inc. is a Delaware Non-Stock Corporation. The Institute has been developed with reference to ISO/IEC 17024 personnel-certification principles and is **not accredited** by ANAB, IAS or any other accreditation body. It intends to seek 501(c)(3) recognition, which has not been granted. No governmental approval, academic equivalence, or guaranteed employment, promotion or salary outcome is claimed or implied.

Examples. All worked examples are illustrative and fictional. Figures are chosen to demonstrate a method, not to describe any real project, organisation or market. Sample examination items, where they appear, are study material maintained separately from any live examination bank.

Completeness. Passages marked **[CONFIRM: ...]** are operational or market facts that have not yet been confirmed from a cited source. A document carrying them is a working draft and is not approved for publication.

Governance and Review

How a document moves from draft to published, what it must survive, and what happens when it is wrong.

1. Roles

Role	Owns
Editorial coordinator	The registry, the calendar, IDs, cross-references, publication gates
Series lead	Coherence across a series; no duplication; consistent depth
Author	The draft, its sources, its arithmetic, its assumptions
Technical reviewer	Correctness of method and calculation; a reviewer never reviews their own draft
Governance reviewer	Claims, legal risk, accreditation language, jurisdiction neutrality
Copy editor	British English, house voice, acronyms, accessibility

One document, one owner, one file. Two authors never edit the same manuscript concurrently.

2. Status lifecycle

Status	Means
draft	Authored, not yet reviewed. May contain <code>[CONFIRM: ...]</code> placeholders.
in-review	Submitted with sources, assumptions and open questions attached.
approved	Passed every gate in §3. <code>placeholders: 0</code> is mandatory.
published	Live, and listed in <code>PUBLISHING-CALENDAR.md</code> with a date.
retired	Superseded or withdrawn. Never silently deleted — see §6.

3. Quality gates

Every document passes all eleven before `approved`. A failure at any gate returns it to `draft`.

1. **Template conformance** — every mandatory section present, in order.
2. **Front-matter validity** — schema-valid; `related` IDs resolve; reading time within $\pm 20\%$.

3. **Factual conformance** — every name, code, fee, duration and legal statement matches [CANONICAL-FACTS.md](#). Retired credential codes are a hard fail.
4. **Calculation verification** — every figure independently recomputed by someone other than the author. Numerical examples get two reviewers.
5. **Source verification** — every citation resolves to something real, with a date. A plausible-looking citation that was not consulted is a hard fail and a conduct matter.
6. **Originality** — no reproduction of protected standards text, tables, diagrams or question banks.
7. **Claims and legal risk** — no accreditation implied; no endorsement implied; no guaranteed outcomes; no jurisdiction presented as universal; no named company or project without a reliable public source.
8. **Non-duplication** — does not restate a topic another document owns.
9. **Style** — house voice; none of the prohibited moves in [EDITORIAL-STANDARD.md](#) §2.
10. **Accessibility** — heading nesting, table headers, figure alt text, no meaning by colour alone.
11. **LinkedIn truthfulness** — the hook is true standing alone, with no caveat withheld.

A document is never approved because it is long, or because a deadline is close.

— 4. What an author submits

Not just the manuscript:

- the draft;
- the sources consulted, with dates;
- the assumptions behind every worked example;
- unresolved questions for a subject-matter expert;
- a list of every [\[CONFIRM: ...\]](#) placeholder and what would resolve it.

A draft submitted without its assumptions is returned unread.

— 5. The release gate

Before any batch is marked [published](#):

```
# no unresolved placeholders in approved or published documents
grep -rn 'CONFIRM:' docs/publication-framework --include='*.md'

# no retired credential codes outside the canonical-facts file that documents them
grep -rn 'PCP-AI\|PFIP\|CPMD\|PDL-AI' docs/publication-framework --include='*.md'

# every document has front matter
grep -Lr '^---$' docs/publication-framework --include='*.md'
```

Each must return nothing (allowing for the documented exceptions in [CANONICAL-FACTS.md](#) and this file).

— 6. Corrections, versioning and retirement

Versioning. **MINOR** for a correction, clarification or added example that does not change guidance. **MAJOR** for anything that changes what a reader should do. A major version resets the review gates.

Corrections. Published errors are corrected openly. The document carries a dated correction note; if the error was material and the document was promoted on LinkedIn, the correction is posted to the same channel. We do not quietly re-upload a fixed file and say nothing — the correction is the credibility.

Retirement. A retired document keeps its ID for ever. IDs are citation keys and are never reused. The file stays in place with `status: retired` and a line naming its successor.

— 7. The standing risks in this programme

Named here so no reviewer has to rediscover them.

Risk	Control
Inventing market or salary data because the document format expects a number	S08 ships as methodology and instrument; every market figure needs a named, dated source (README.md §4)
Drifting into accreditation-adjacent language	§3 gate 7; the exact permitted wording is in CANONICAL-FACTS.md §2.1
Propagating the retired PCP-AI code from legacy source material	§3 gate 3; §5 grep
Stating an examination item count that does not exist	CANONICAL-FACTS.md §4.2 — no count exists; a job-task analysis will set it
Presenting the 30-hour CPD target as a binding requirement	CANONICAL-FACTS.md §4.2
Conflating membership grades with certification	CANONICAL-FACTS.md §6
A LinkedIn hook that is true only until you read the document	§3 gate 11
Duplication across 100 documents by 14 hands	§3 gate 8; series leads own this
