

PCI AI

Project Controls
Institute Global, Inc.

The professional home of project controls.

Certification, membership and community for project controls,
cost engineering and project finance — with governed AI at the core.

GOES LIVE · 1 SEPTEMBER 2026

“AI proposes. The professional disposes.”

Project controls is changing. Judgment matters more than ever.

Schedules, forecasts, cost models and risk registers are increasingly drafted by digital tools and AI. The technology does not remove accountability — it concentrates it.

- AI can draft the schedule and the forecast.
- Only a professional can decide whether to trust them.
- That judgment is what projects now depend on.

A profession the world is short of.

25 million

new project professionals needed globally by 2030

SOURCE: PMI · TALENT GAP 2021

US\$94 trillion

of infrastructure investment needed to 2040 — all of it needs controls

SOURCE: OXFORD ECONOMICS · GLOBAL INFRASTRUCTURE HUB

2.3 million

project-oriented roles to fill every single year this decade

SOURCE: PMI · TALENT GAP 2021

~90 million

people in project-oriented employment worldwide by 2027

SOURCE: PMI · TALENT GAP 2017

Third-party estimates, cited as published. PCI reports market data — it never promises outcomes.

A discipline without a professional home.

Planning, cost, risk, forecasting, contracts and project finance are one integrated capability on every real programme — yet no focused standard has ever certified them together, and none treats AI as part of the discipline.

Fragmented

Separate certificates for separate techniques — nobody certifies the whole job.

Outdated

AI is redrawing the work faster than any legacy credential has kept up.

Unverifiable

Paper certificates and claims an employer cannot check in seconds.

INTRODUCING

The Project Controls Institute.

An independent, non-profit certifying body — founded 2025, going live 1 September 2026 — for the integrated discipline of project controls, cost engineering and project finance, with the governed use of AI treated as part of the profession itself.

Built in the open: published body of knowledge, published policies, public verification of every credential — and complete honesty about what is in place today versus what is still being established.

“AI proposes. The professional disposes.”

Three credentials. One standard.

PCL-AI

PCI AI Project Controls Leader

The flagship: planning, cost, EVM, risk and forecasting as one integrated capability — with governed AI throughout.

PFL-AI

PCI AI Project Finance Leader

The finance of projects: funding, modelling, commercial control and the judgment to connect money to delivery.

PML-AI

PCI Project Management Leader – AI

Project leadership for the AI era — decisions, governance and delivery built on controls-grade information.

Scenario-based examinations · framework developed with reference to ISO/IEC 17024.

Real. Proctored. Verifiable.

- **13-domain body of knowledge**

From accounting, cost and EVM to scheduling, risk and AI-for-controls — published, and free for members to study.

- **Scenario-based examination**

Cases that test judgment, not memorised trivia. There are no shortcuts and no exemptions — every credential is earned.

- **Secure, proctored delivery**

A locked-down exam client with live proctoring; results can be withheld on integrity review.

- **Public verification**

Every credential and award is checkable by anyone, in seconds, at projectcontrolsinstitute.org/verify.html.

The machine drafts. The professional decides.

Validate the output

What was the model asked, what data did it see, and where would it be wrong?

Trace the thread

From the dashboard back through the cost model to the schedule logic and the contract.

Own the decision

AI-assisted is never accountability-free. The professional signs the forecast.

The first certification standard to treat this as core competence.

Three routes into PCI.

Route	Fee	Exam	You receive
Standard	Paid	Yes	Your PCI credential — earned by passing
Founding (limited window)	Free	Yes	Your PCI credential — earned by passing
Honorary (board-conferred)	Free — no fees, ever	No	Honorary Fellow (PCI) — always labelled honorary

An examined PCI credential is only ever earned by passing the examination — on any route. Honorary Fellow (PCI) is a separate recognition, conferred by the board at its discretion.

FOR DISTINGUISHED CONTRIBUTION

Honorary Fellow (PCI).

A board-conferred recognition for practitioners who have already given the profession something worth recognising. No examination. No fees — not to apply, not if conferred, not ever.

- A registered PCI-HON award — publicly verifiable, always
- A certificate conferred with a personal citation
- Member access: body of knowledge, Simulation Lab, lectures
- Events, webinars and a 25-country chapter community

Always labelled honorary — never the examined certification.

Apply for the board's consideration

WHAT MEMBERSHIP OPENS

A serious study stack, included.

Simulation Lab

MEMBERS

Graded practice on real planning and cost scenarios — with a working templates library.

MCQs on Certuvo

MEMBERS

Official question practice on PCI's study platform.

Downloads Centre

FREE FOR EVERYONE

Handbook, exam blueprint, formula sheet, glossary, sample questions, study guide.

Body of Knowledge & books

MEMBERS

The full 13-domain BoK as a book; further editions in production.

Video lectures

MEMBERS

Recorded domain by domain, plus the webinar library.

Chapters & community

FREE FOR EVERYONE

25 country chapters and a growing professional network.

Member access applies to student members and Honorary Fellows alike.

FOR STUDENTS — THE FOUNDING WINDOW

Start the career. Fees waived.

While the founding window is open, student membership and the examination fee are waived — and membership unlocks the body of knowledge, the Simulation Lab and the lectures.

The exam is unchanged: real, proctored, and passed on merit. Nothing is given away except the fee — that's the point.

**Founding members are recognised, permanently,
as early builders of the standard.**

GLOBAL FROM DAY ONE

Built for the whole profession.

25

country chapters, from the US and UK to the Gulf, India and Australia

7

languages at launch — English, Arabic, Chinese, French, Korean, Russian, Spanish

13

domains in the published body of knowledge

3

credentials in the AI Project Leadership Suite

FOR EMPLOYERS

Capability you can verify in seconds.

One shared standard

A common capability language for controls staff across projects, borders and business units.

Zero-trust verification

Any candidate's credential checked instantly at verify.html — no calls, no PDFs, no doubt.

A pathway your teams can see

Membership, CPD and a credential ladder that gives controls careers a visible next step.

Corporate programmes and team pathways: projectcontrolsinstitute.org

An honest position.

PCI does not claim to be what it is not yet. It is not currently accredited; its framework is developed with reference to ISO/IEC 17024, and it is building toward formal accreditation — in public, step by step.

It never guarantees jobs, salaries or third-party recognition. It publishes its policies, its body of knowledge and its governance — and every credential it issues can be verified by anyone, at any time.

**For a certification body, trust is the entire product.
We would rather understate than oversell.**
