

Review Notes — items flagged by authors for subject-matter-expert attention

VERSION 1.0 · DRAFT

2026-08-05

PROJECT CONTROLS INSTITUTE GLOBAL, INC.

AI proposes. The professional disposes.

— About this document

Series	Publication Framework
Version	1.0
Status	draft
Date	2026-08-05
Unresolved placeholders	1

Notice. This document is an educational publication of Project Controls Institute Global, Inc., and does not constitute accounting, tax, legal, financial or other professional advice. It must not be relied upon as such. Where a topic depends on the contract or the governing law, entitlement and treatment vary by jurisdiction; take local advice.

Standards. Standards and frameworks are referred to by name and described in this publication's own words. No standard's text, tables, diagrams or question banks are reproduced. All trademarks remain the property of their respective owners, and no endorsement by any standards body, employer or vendor is implied or should be inferred.

Status. Project Controls Institute Global, Inc. is a Delaware Non-Stock Corporation. The Institute has been developed with reference to ISO/IEC 17024 personnel-certification principles and is **not accredited** by ANAB, IAS or any other accreditation body. It intends to seek 501(c)(3) recognition, which has not been granted. No governmental approval, academic equivalence, or guaranteed employment, promotion or salary outcome is claimed or implied.

Examples. All worked examples are illustrative and fictional. Figures are chosen to demonstrate a method, not to describe any real project, organisation or market. Sample examination items, where they appear, are study material maintained separately from any live examination bank.

Completeness. Passages marked **[CONFIRM: ...]** are operational or market facts that have not yet been confirmed from a cited source. A document carrying them is a working draft and is not approved for publication.

Review Notes — items flagged by authors for subject-matter-expert attention

Authors submit their assumptions and unresolved questions with every draft ([GOVERNANCE-AND-REVIEW.md](#) §4). This file collects the items that need a decision from someone with authority over the subject, rather than an editorial fix.

Nothing here blocks a draft. Each item blocks approval of the document it touches.

— 1. Technical claims needing subject-matter-expert review

1.1 [AIG-06](#) §8 — P80 below the sum of expected monetary values

Flagged by: the S02 author, during drafting.

An early draft asserted that a simulated P80 falling below the arithmetic sum of expected monetary values indicates a modelling error. **That is false**, and the document was corrected before submission.

Where a single rare, high-impact risk dominates the register, the mean is lifted by a tail that the 80th percentile never reaches, so $P80 < \Sigma EMV$ is a legitimate result rather than a defect. The published text now teaches it as a result to investigate and explain rather than a fault to fix.

Why it is here: the correction is believed right, but it is exactly the kind of claim that should not rest on one author's judgement. A reviewer with quantitative risk experience should confirm the framing before [AIG-06](#) moves past *in-review*. The underlying Domain 13 material treats simulation output more confidently than this, which is itself worth a look.

— 2. Operator decisions the documents cannot make

These are recorded in [CANONICAL-FACTS.md](#) §9 and appear as [CONFIRM: ...] placeholders in the affected manuscripts. They need an owner, not an editor.

#	Item	Affects	Why it cannot be resolved editorially
2.1	Examination fee — platform seeds USD 500, legacy candidate pack states USD 350	CER-01, CER-05	Two published sources disagree on a price. Only the Institute can say which is real.
2.2	CPD categories — the portal serves five, the public pages describe four different ones	CER-08	A candidate reading the website and then using the portal meets two vocabularies. One surface has to change.
2.3	Binding CPD hours and mandatory AI-currency hours	CER-01, CER-08	30 hours is a portal target; <code>cpd_required_hours</code> defaults to 0. The binding rule is unpublished.
2.4	Retake waiting period — platform default 0 days vs "a short waiting period applies"	CER-05	Policy contradiction between code and handbook.
2.5	The reschedule dead zone — free reschedule ends at 72 h, bookings lock at 24 h	CER-05	The published rules simply do not say what happens in the intervening 48 hours. A genuine gap.
2.6	Refund and cancellation terms	CER-05	Candidates must consent to a refund policy before booking, yet its terms exist nowhere in the platform settings.
2.7	Two scheduling clocks — 12-month payment-to-schedule entitlement vs 365-day booking horizon	CER-05	Rescheduling moves the booking without extending entitlement, so a candidate can hold a valid booking for a date their entitlement no longer covers. Needs a rule, not a caveat.
2.8	Reasonable-adjustment notice period	CER-03	Unpublished.
2.9	Founding-route window status — open, closing, or closed	CER-04	Time-sensitive and unstated.
2.10	Appeal deadline, acknowledgement and decision timescales	CER-07	Unpublished. An appeals process without timescales is not yet a process.
2.11	Post-expiry grace and reinstatement requirements	CER-08	Unpublished.
2.12	Proctoring evidence retention beyond the seeded 365 days	CER-06	Interacts with privacy obligations; not an editorial call.
2.13	Honorary Fellow (PCI) and the FPCI membership grade	CER-04	Whether the honorary designation interacts with the membership ladder is undecided anywhere. CER-04 §5.3 explicitly declines to decide it.
2.14	Credential level — database records <code>Leader, certification.html</code> renders <code>Professional</code>	CMP-02, CER-02	A public page contradicts the system of record.

— 3. Legacy source material carrying the retired credential code

Not defects in this framework — defects in the material it draws on. Authors were instructed to draw on the substance without propagating the code, and **not** to edit these files.

File	Issue
docs/bok/ (all domain manuscripts, README, style spine, PDF)	Authored throughout as PCP-AI
docs/publications/01-04 and the compiled PDF pack	PCP-AI in filenames, titles and body
docs/downloads/candidate-ai-use-policy.md	PCP-AI in the subtitle, "Who this is for" and \$2
docs/downloads/examination-blueprint.md, candidate-handbook.md	Retired naming and the legacy A/B/C domain-group names

Recommendation: a separate, single-purpose change should rename these consistently. Doing it as part of authoring would have mixed a mechanical rename into a content review, and would have made both harder to check.

— 3a. Conventions the documents refused to settle

Where two conventions are genuinely in live use, the manuscripts name both and require the project to declare which it uses, rather than the Institute quietly picking one. Recorded so a reviewer knows these were decisions, not oversights.

Convention	Where	Treatment
Index rounding — 2 dp (docs/downloads/master-formula-sheet.md) vs 3 dp (EDITORIAL-STANDARD.md §5)	TPL-07 §3.4	Both named; 3 dp recommended with a reason; the project must state its choice
Whether contingency sits inside budget at completion	TPL-01 , TPL-04 , TPL-07 , TPL-08	Both conventions in live use; each template requires the project to state its own
Schedule-quality thresholds	BPG-05 , TPL-14	Measurement supplied as arithmetic; the threshold is a parameter the project agrees and records. No third-party checklist reproduced, no threshold attributed to a published standard
Concurrency in delay analysis	BPG-12	Three competing approaches presented; which applies depends on contract, governing law and forum

— 3b. Further items for the coordinator

1. **CMP-10 title variance.** The registry row reads "Assessing competence — evidence, rubrics, moderation"; the manuscript uses "...rubrics and moderation". Align one to the other.
2. **American spelling inside a platform string.** The seeded PML-AI competency is "Benefits realization". [CMP-05](#) renders it realisation for a British English series and says so openly. The platform string is the thing that should change.
3. **Word-count basis needs a ruling.** Several table- and clause-heavy documents ([AIG-08](#), [AIG-10](#), [AIG-11](#), [CAR-07](#), [CAR-08](#), [SAL-02](#)) sit inside the length band on prose but above it on a raw `wc -w` that counts table pipes and list markers. A series lead should rule on which basis the ceiling is measured before anyone trims substance to hit a number.

4. **S07 depends on S08 being real.** CAR-01 and CAR-06 route every market question to SAL-01 and SAL-06 rather than estimating. If S08 slips, S07 publishes a promise it cannot redeem — the calendar sequencing (S07 in weeks 44–47, S08 in 48–50) should be reversed or the cross-references softened.
5. **The Body of Knowledge names commercial AI products** in KA 13.4.1's tool-category table. Series S02 deliberately did not carry those forward, referring to capability classes instead. The BoK table is worth revisiting on its own terms.

— 4. Deliberate omissions

Things an author could have written and correctly did not.

Omitted	Why
The on-screen calculator described in the legacy candidate pack	Not among the platform-confirmed examination settings. Claiming a tool that may not exist in the delivered exam is a candidate-harm risk.
Any credential-ID format	The schema's example still carries a retired code, so no format could be stated safely.
Any examination item count	None exists in the platform. A job-task analysis will set it.
Any salary, pay or market figure	The survey has not been run — the defining constraint of series S08.
