

The AI Project Leadership Certification Suite

Three credentials. Three references. One standard of professional accountability.

WHAT IT IS

Three Bodies of Knowledge covering project controls, project finance and project management — each written as a working reference rather than a syllabus summary, and each treating the governed use of artificial intelligence as part of the discipline rather than an appendix to it.

PCL-AI

PCI AI Project Controls Leader

13 domains · 61 knowledge areas
26 sector case studies

PFL-AI

PCI AI Project Finance Leader

16 domains · 61 knowledge areas
33 sector case studies

PML-AI

PCI Project Management Leader – AI

16 domains · 63 knowledge areas
33 sector case studies

NUMBERS ARE RECOMPUTED, NOT RETYPED

In PFL-AI and PML-AI, worked examples, in-text figures, exercise answers, case-study numbers and *every* multiple-choice option — not only the correct one — are recomputed from their stated inputs at 28-digit precision and compared against the printed value. The suite is fail-closed: a domain does not pass gate until it passes in full. PCL-AI has no equivalent suite yet; its numbers were checked by sampled independent recomputation across all thirteen domains, and building the full harness for it is the programme's largest open item.

15,613

machine calculation checks in
PFL-AI and PML-AI, all passing

45

domains across the three volumes

185

knowledge areas

92

sector case studies

BACKED BY THE PCI STANDARDS

113 mandatory professional standards with 532 process requirements. Each states its purpose, who owns the decision, what evidence must exist, what practice is prohibited, what triggers escalation, what artificial intelligence may assist with and what it must never decide, approve or certify — and a **compliance test an assessor can actually perform**. They are certification requirements established by the Institute, not legislation.

ON EXTERNAL STANDARDS

Frameworks are named and their principles described in the Institute's own words. No protected text, table, figure or question from any external publication is reproduced, and no reference implies endorsement by or affiliation with its publisher.

AI proposes; the professional verifies, decides and remains accountable.
