

PCI STANDARDS

A rule you
cannot test
is a slogan

What separates a professional standard from a poster.

Most codes stop here

"The professional shall exercise due care and act with integrity."

Nobody disagrees with it. Nobody can be shown to have breached it, either.

The test question

Could two competent reviewers, applying this to the same evidence, reach the **same** answer?

If not, it is not a requirement. It is an aspiration.

Weak

"Compliance is demonstrated when the forecast has been properly reviewed."

Properly, by whom, against what?

Strong

Compliance is demonstrated when the approved forecast reconciles without unexplained difference to the cost ledger, the commitment register, the accrual schedule, the approved change register, the risk-adjusted estimate and the authorised schedule status date.

The difference

The second one names the documents, so an assessor can ask for them. The first one names a feeling.

532

process requirements across 113 PCI Standards. Each carries a compliance test written to be performed, not admired.

EVERY STANDARD STATES

Who decides.
What evidence.
What is prohibited.
What AI may not do.
